DUTCH BULBS AND HARDY PLANTS

Wayside Gardens

Bulbs From Holland

FOR SEVERAL YEARS it has been our custom to mail the new Bulb Catalog early in May. It is done to enable our customers to take notes and make their selections for the coming season while the Tulips and spring bulbs are still in flower. There would be no object in this early mailing if we offered only the ordinary standard varieties. But many of the newer kinds offered by us exclusively must be ordered AT ONCE to be sure of getting full delivery. The fact is that The Wayside Gardens Company are the largest importers of fine and unusual bulbs in this country. No other firm offers as wide a choice of really fine bulbs as we do. You will ask why? Simply because of many of the new things offered by us, no more bulbs are available than the quantity we require for our customers, which is all there is grown.

Before August First

Notwithstanding our cautioning and urging, many people desiring the better things sent their orders so late last year, we were not able to import in time for their needs. Consequently, were not able to fill their orders in full. May we, therefore, press this point once more. Send your order for the rare things BEFORE AUGUST FIRST if you possibly can do so.

THAT MATTER of QUALITY

The enviable reputation we enjoy is known to most gardeners. It is constantly strived for by giving faithful service and sending faultless quality.

Quality perhaps is the most important of the two and happily we can do more than most in that respect, because the secretary of our company is a member of the firm of Grullermans in Holland, internationally known as the finest growers of bulbs, whose early business years were spent with that firm, obtaining an intimate knowledge about bulbs, an

opportunity which does not present itself to the average American importer who consequently is not as well informed.

GUARANTEE

We guarantee every bulb we send out to be in first class condition in every respect, of top size, and true to name. We further guarantee that all will bloom for you if you will give them reasonable care and carry out our cultural instructions which are enclosed with every order. Your money will be refunded or new bulbs sent if they do not come up to our claims or your expectations.

We guarantee safe arrival to all points within the United States, and upon your notice will replace immediately any damaged bulbs at our expense.

A like guarantee is, we believe, not made by any other firm in America. It is only possible because the bulbs we sell are the choicest obtainable imported from the best and most critical grower in the world.

Buy your bulbs from WAYSIDE GARDENS and see the difference!

Berberis Mentorensis

U. S. Plant Patent No. 99

STAYS GREEN PRACTICALLY THE ENTIRE YEAR

A Remarkably Fine Hedge Plant That Withstands Heat and Drought

Berberis Mentorensis is the result of a cross between, Barberry Thunbergi and Barberry Juliana. It has very rugged, strong, upright growing branches and quite formidable thorns. Its foliage is heavy and thick, and of perfect color—a green as dark as the Japanese Yew.

In Northern Ohio the leaves remain green until after the holidays, are dropped during the late winter, and new foliage appears early in April. Plants growing south of here retain their foliage much longer. In southern parts of the country, Berberis Mentorensis is evergreen.

Its most valuable attribute is its ability to withstand heat and drought. Few other shrubs or hedge plants are able to go without water and withstand intense heat as Barberry Mentorensis and look as well. During the hottest weather there is never any sign of wilting or burning, much to the amazement of everyone.

Upright growth; easy upkeep (requires really no pruning), and its tenacious foliage, more than compensate for the lack of berries. We heartily recommend Berberis Mentorensis to you and claim it to be the best moderately priced and perfectly hardy hedge plant to date.

THERE ARE SIX OUTSTANDING POINTS OF SUPERIORITY ABOUT THIS BARBERRY:

1. It is evergreen practically the year around. Think what that means.
2. Its sturdy, erect growth carries a thick, dark green foliage right down to the ground. Is never, bare-legged.
3. When used for a hedge, its thorny, strong growth forms a formidable barrier to man or beast.
4. Needs no pruning. It is of erect growth which becomes dense when the plant is three or four years old. No upkeep! No pruning!
5. Combined in a foundation planting with evergreens, it provides a beautiful and artistic contrast at very small expense and without elaborate preparation of soil.
6. Is not "choosey" about where it grows. No matter if you can't make other broad-leaf evergreens, such as Azaleas and Rhododendrons, thrive in your soil, this new Barberry will. It is equally at home, whether it is acid or alkaline soil.

THE HOLLANDIA GARDENS

South Vienna, Ohio,
Nov. 28, 1936.

WAYSIDE GARDENS,
Mentor, Ohio.
Attention, Mr. Grullemans.
Gentlemen:

In the spring of 1935 we bought 200 Berberis Mentorensis. We planted them in the nursery and sold out of them from time to time a small number of specimen plants.

We left one row intact and are certainly enthusiastic about the prospects of this plant for hedge purposes, and for planting where beauty and protection are needed.

As you know, we experienced the most disastrous drought here last summer, having no rain from May 10th until August 15th. Viburnum, Forsythia, Bush Haneysuckle had lost all their foliage, Euonymus Radicans and Patens lost their leaves, but Berberis Mentorensis remained green and, in fact, it was the only plant that kept producing new shoots.

To anyone interested in something worth while as a hedge that can really take the punishment, I do not believe it can be equalled. Here it is almost December 1st and it is still just as vigorous and as showy as Mahonia aquifolia.

I am writing you this because I feel that this was a test which was most unusual and certainly should be of interest to all that have had trouble growing anything where moisture is limited and growing conditions are unfavorable.

Very truly yours,

The Hollandia Gardens,
MARK AUKEMAN.

The above illustrated hedge is 5 years old, has never been clipped, is perfect in shape, and is about 3½ feet high.

Here's Drought Proof

Let us quote from a letter of Mortimer Burroughs, received last October. He is a garden architect at Clayton, Missouri. This is what he says:

"I have been much impressed with the new Borberry Mentorensis during the terrible drought we had in St. Louis this summer.

"We moved several when in full leaf last spring. Planted them on the north side of the house in dense woods. They received no water during the whole miserable summer, and scarcely any sunlight. In spite of this grilling handicap, they did not even droop, and actually made considerable new growth.

"As a shrub for foundation planting, either in shade or full sun, it is excellent. Its upright dense habit of growth makes it ideal for hedges, as it thrives equally well in shade as in full sun."

The New Ideal Darwin Tulips

The Word of Two Nationally Known Authorities

Richard Wright (House & Garden) writes:

For several years now the "Ideal Darwin" Tulips have made a most gallant and brilliant display in my garden. They possess sturdy substance that leaves nothing to be desired. Their color range is so generous that both in massed plantings and in shoals through the herbaceous border all manner of subtle and striking combinations can be made. They are a garden investment that pays high premiums of beauty.

Leonard Barron (Flower Grower) writes:

Further study of and experiment with the Ideal Darwin Tulips merely adds weight to the conviction already expressed; that they do form a really ideal group in that splendid family of bulbs. Their bright colors, their cheerful bearing and, yes, their real gaiety in the garden, make them delightfully welcome.

The Ideal Darwins have, indeed, made my garden much more joyous in Tulip time.

Its widely opened cup of warm, reddish purple, its generally superb appearance, the fine texture of its petals make it an outstanding purple Tulip, and one deserving its illustrious name. The flower is carried on a strong, tall stem. With its striking creamy base outlined with blue, and its purple-velvet anthers, it is a variety to adorn the stateliest garden. A beautiful combination may be had by planting Cottage Tulip Mayflower or a similar shade amongst, or in front of, William the Silent. Height 30 inches.

***Choice Mixed Breeder Tulips** \$0.60 per 12; \$4.00 per 100
Mixed bulbs, as a rule, do not appeal to the planter because of the difficulty in the blending of colors. Breeder Tulips, however, are in a class by themselves, and their colors do permit easy blending. They are in shades of bronze, golden bronze, violet, buff, maroon and terra cotta. We suggest a liberal planting for cut flowers.

Multi-flowered Tulips

Bunch-flowering or Multi-flowered Tulips are a most interesting lot. Instead of producing the conventional single stem with one bloom on top the varieties offered under this heading all grow a strong main stem with from 3 to 6 branches, half way up the stem, each side shoot or branch carrying its own flower. The result is that 3 to 6 or sometimes 8 flowers are obtained from one bulb. All

the blooms are of good size, are gracefully spaced and as you can well imagine, produce an unusual effect and a great mass of color. The soil must be kept rich because if planted in poor ground they will not be as floriferous.

All the varieties offered are most attractive, some very unusual in their coloring.

***Aureole** \$1.10 per 12; \$8.00 per 100
A combination of red, yellow and brown, large black base. It looks not unlike a tiger's skin. From 3 to 6 blooms on one stem.

Cottage and Hybrid Tulips

(May-Flowering Tulips)

The Cottage Tulips came into bloom in early May. They are hardy and robust, with long, slender, but very stiff stems. The flowers are mostly long and oval, many of them with the petals gracefully reflexed. The Cottage Tulips as a class are rich in the more delicate and artistic

shades of pink, yellow, orange, and fawn with salmon, old rose, and amber. They are best of all Tulips for cutting and should be planted outdoors. They will last for many years.

***Alosko** \$1.25 per 12; \$9.25 per 100

Undoubtedly destined for a great future. Height 36 inches.

The anthers are pitch black and the base of deepest blue. A glorious Tulip on 29-inch stem. Plant it together with Ideal Darwin Mount Everest for stunning effect.

Bizarre and Bybloem Tulips

(Old Dutch Tulips)

Bybloem and Bizarre Tulips are "rectified" Breeder types. The Tulips are of an old race which has been grown in Holland and in France since the beginning of the seventeenth century, and which caused the famous Tulip craze in 1635. The Bybloems are queerly striped and feathered rose or violet on a white ground. The Bizarres have dark brown stripes and feathering on a yellow ground. They flower about the same time as the Breeder and Darwin Tulips but do not grow quite so tall, and are seen at best advantage when planted in clumps in the herbaceous border or among evergreens and shrubs. They are above all sensational show Tulips. All farm rare artistic beauty.

BIZARRES

Bleu Celeste \$0.65 per 12; \$4.75 per 100
Large, violet-purple Tulip flowering later than any other double sorts. It is very fine for indoor decoration and for the garden. Height 18 inches.

Maunt Tacama \$3.00 per 12; \$19.50 per 100
A magnificent giant double white Tulip which reminds one of a peony in full bloom; superb for beds.

Rembrandt Tulips

Rembrandt Tulips are nothing more or less than Darwin Tulips in which white, lavender, red and other colored stripes or flakes have appeared. The blending of colors is at all times in perfect harmony and most attractive and colorful. They are especially fine when used for cut flowers. They bloom at the same time as the Darwins and require the same care. We advise their use in a mixture only.

***Finest Mixed Rembrandt Tulips** \$0.65 per 12; \$4.75 per 100

p. s. Named varieties of Rembrandt Tulips are not worth growing; the most attractive effect is obtained from a mixture of colors.

Chinese Lantern Tulips

(Fairy Tulips)

Especially well suited for southern gardens.

Imagine a handful of Tulips having the delicate pure pastel shades of our finest Sweet Peas and you have but a fair description of their colors. The general effect, however, is that of lighted, delicately colored Chinese Lanterns. The perfectly formed globular blossoms glow with an iridescent light not heretofore seen in Tulips. The colors are too exquisite to accurately describe. They have been admired by visiting growers from all over Europe.

The introduction of these lovely hybrids has been given to Wayside Gardens. The colors are all in those elusive tints of salmon, orange, and salmon-pink of the most delicate pastel shades yet brilliant and vibrant with life. They are late flowering, blooming after most of the Darwins are out of bloom.

Chameleon Tulips

Here we have a collection of new Tulips which in form and shape resemble the Darwin Tulips; the coloring, however, reminds one of the Cottage Tulip Picotee.

When Chameleon Tulips first come into bloom they show only faint tracings or delicate margins of pink on the edges of the flower petals, with the development and consequent aging of the bloom these markings enlarge and gradually spread over the entire flower. The blossoms never look the same from day to day and it is truly fascinating to watch this change of color taking place.

- ***Chameleon Tulips in Mixture of the Above Varieties** as well as many others not yet offered. \$0.80 per 12; \$6.00 per 100

Lily-Flowering Tulips

The Tulips offered under this heading have been kept by themselves because of their distinct Lily-like flowers. They really belong with the Cottage Tulips but would be lost or difficult to find if offered in that already quite large group.

Lily-Flowered Tulips bloom the same time as the Cottage Tulips and are best used where a light, airy and graceful effect is desired. The delicately curved petals give a delightful effect. As a flower for cutting, it surpasses the regular Tulip because they are so much more graceful. Don't miss planting a few this year. The most complete list in existence is offered here.

Parrot Tulips

The artistic form and coloring make them especially suitable for cut flower purposes. In the garden, if planted in borders or groups, they are not always satisfactory as they lack the vigorous, straight stems of the other Tulips with the exception of the new varieties which have straight and tall stems as the Darwin Tulips. They are extremely effective planted in long drifts in front of evergreens.

A glorious Parrot Tulip of bright violet shaded steel blue. The unusual flower is large and carried erect on a strong 30-inch stem. A rare novelty.

Single Early Tulips

Few, if any, of the spring-blooming flowers rival the Single Early Tulips for brilliancy of bloom or ease of culture. They are excellent subjects for formal beds on the lawn or for garden borders. While they do not possess the same size of bloom and length of stem as the May-flowering Darwin, Breeder and Cottage varieties, they are used where earlier blooms are desired. Many of the varieties may be forced in bloom in January, while

all of them may be easily had in flower in pots late in February or early March.

Note: The letters A, B, and C following the varieties indicate their relative earliness of bloom, but, with few exceptions, most of the varieties bloom outdoors about the same time when planted in masses. The figures indicate the height in inches.

Botanical Tulips and Species

Tulip species, coming as they do from southern Europe and Asia, should all be planted in dry, sun-baked locations. No water should reach the bulbs during the summer.

The following collection of Tulip Species or Botanical Tulips includes a great number of beautiful and interesting varieties, which show a bewildering variation in size and shape of flowers, structure of the leaves, habits, etc., and they only have in common that they grow wild in

some part of the world, Asia Minor, Central Asia, Greece, the Mediterranean, etc. Cultivation has not modified them and they may be planted in the rock garden between creeping plants or in colonies in small, warm nooks, a situation where the larger flowered Garden Tulips would be out of place. Hyacinths for Indoor Growing or Exhibition

No one would have expected that our old Mother Earth contained such entrancing fragrance had not Hyacinths, by some miracle of alchemy, revealed it to us.

Here, too, we have it combined with the widest possible range of color.

They open to greet us before the new spring dawns, if we but give them a share of our garden, and pour out their incense as if in token of their gratitude and thanks for their deliverance from a long imprisonment.

Albatros (Arentine Arendsen)

One of the finest whites; long spikes with large, snowy white bells. Early, fine for forcing and a good bedder.

*City of Haarlem

The finest of the yellows. Well-formed trusses of pale yellow bells. An excellent variety.

New Multiflora Hyacinths

By a special cultural treatment in Holland, Hyacinth bulbs can be grown which will produce from 6 to 10 excellent flowers on one bulb. We have secured about 7000 bulbs of these Hyacinths. A thousand more or less of each color. If you like to grow bulbs in the house, here is an opportunity you must not overlook. They are easily grown in Wayside Gardens Bulb Fiber or earth. Each bulb will come carefully packed in a small box. Cultural instructions will go with each order. Don't pass up the opportunity of having several clusters of fragrant, colorful flowers this winter. They may, of course, also be grown in the garden.

French Roman Hyacinths

The early Roman Hyacinth, with its graceful spike of fragrant bells, is one of the earliest of all winter-flowering bulbs.

New-crop bulbs will be ready in September, when they may be planted in pots or pans of a compost containing two-thirds fibrous loam and one-third sand. They may also be placed in the more artistic ornamental bowls now available in any china store, using our prepared Bulb Fiber as a filler, which only needs to be kept continually moist, requires no additional fertilizer, and in which the bulbs thrive and bloom luxuriantly. Bulbs planted in September bloom in December.

Hyacinths for Garden Planting

Truly a precious source of scent and color, at a time when other flowers are still too shy or fearful to venture forth. No other plant in early spring displays such an abundance of jubilant tones of red, rose, lavender, purple, blue, yellow and orange. No other spring plant enriches our parks and gardens with a heart-lifting fragrance so soon after the snow is gone. No other plant requires so little coaxing to give its all, either in the garden or in the house. As house plants, in bowls with bulb fiber or on glasses filled with pure water or in good old-fashioned clay pots and pans with garden soil, its "rising spire," colorful and fragrant, effects a rare and perfect quality of delight.

The most satisfactory Hyacinth flowers for the garden are produced from the bulbs about 15 to 17 centimeters in circumference. These sizes are the most suitable for outdoor planting in formal beds or in drifts in the border. The larger, say 17 to 18 centimeters, are ideal for bowls with fiber, or clay pots and pans with soil. They are economical grades, selling at 30 to 40 per cent less than the "top sizes." Top sizes should be used for water glasses, and for contests at shows or by those who desire the finest and largest bloom. They are offered on the opposite page.

Special Named Varieties in Distinct Shades of Color to Flower at the Same Time

The Hyacinth chosen to represent each of the following shades of color is a variety which we have found from trials will be best in the three essential requirements: Best in its color; stoutest stem; largest truss of bells; we desire our patrons to know that we have avoided using varieties that are of weak stem, and that do not support the blooms under normal garden conditions.

Bedding Hyacinths

Second Size or Bedding Hyacinths—bulbs measure about 15 to 16 centimeters in circumference.

MIXED

All Colors Mixed.

Any of above Hyacinths: \$0.90 per doz.; \$6.75 per 100;
\$62.50 per 1000.

Culture: These Hyacinths should be planted from 6 to 10 inches apart, and covered with at least 4 inches of soil on the top of the bulb. For beds or borders close to the conservatory or dwelling, 6 inches will make a fine display; but where the beds are planted to be viewed from a distance, they may be planted 10 inches apart. Hyacinths planted alternately with Darwin Tulips produce a color effect in the same bed lasting better than a month, and for this combination 6 inches from bulb to bulb is also a very suitable distance. It is advisable to cover, after the bulbs have been planted, with leaves or some heavy material that will prevent them from freezing or being affected by early spring frosts after they have started. Hyacinths, as well as Tulips, should be planted by November first in this latitude, as they are the better for early planting.

Miniature Hyacinths

MIXED

Any of the above Hyacinths: \$0.75 per doz.; \$5.00 per 100;
\$45.00 per 1000.

Miniature Hyacinths should be planted 5 to 6 inches apart and covered with at least 4 inches of soil on the top of the bulb. They are particularly well adapted for planting in informal groups in the borders and are highly successful in beds. An attractive way to plant them is to combine them with Darwin Tulips or Cottage Tulips, setting the bulbs alternately. A flower bed so handled will be a splash of color for over a month. First the Hyacinths come into bloom. When the flowers fade, they may be removed, to be replaced by the Tulips which carry on the display of color well towards the end of May.

To prevent damage from frost, we advise a liberal covering with straw or any other garden litter after the ground has become frozen.

Colchicum - Meadow Saffron

(Giant Autumn-Flowering Crocus)

Colchicum are autumn-flowering bulbs with large Crocus-like blossoms which appear during the months of September and October, without foliage. The foliage, however, appears early in the spring about the same time the Tulips and Hyacinths are in bloom and disappears in June. They are especially recommended for planting between the taller growing rock plants such as Cerastium, Vinca, Pachysandra and the various Sedums, where their bold, checkered Crocus-like blossoms are seen to the best

advantage. Blooming in September and October when flowers in the rockery are scarce, they are especially valuable. They may be also planted in the open woods or in naturalistic plantings of any sort. The bulbs, if kept indoors, will bloom during September and October in the window without any earth or water and after blooming, the bulbs may be planted in early November outdoors, and will not suffer in the least.

Autumn and Spring Flowering Crocus Species

Besides the Dutch Crocuses there are certain species that bloom very much earlier in the year, often before the snow has gone. The flowers of these wild sorts are smaller than those of the Dutch kinds but they are as vigorous and free as the others. Given a sunny position in the rock garden or a sheltered position in grass where the sun may encourage them freely, they will surprise you by their hardy appearance in the face of cold and storms.

Crocus Imperati, pale lilac with buff jackets, often

flowers in late February, and is closely followed by Crocus Sieberi, a fuller, purer mauve sort; it has as a companion the deep rich yellow Crocus Susianus, which is even more attractive in the bud stage with its dark, rich brown flowers on the exterior of the segments. Once planted, they will take care of themselves for many years. Then comes Crocus Tommasinianus, an exquisite vasselike form, in color varying from a pale mauve to quite a rich purple. This variation is one of its great attractions. These all increase as freely as do the Dutch varieties.

Narcissi = Daffodils

The past few years have seen tremendous progress in the development of the Daffodil. Magnificent new varieties are now available and if you are a lover of Daffodils may we suggest you plant a few bulbs of such kinds as Beershebo, Loveliness, Mrs. R. O. Bockhouse, John Evelyn

or Moonshine. Many of our friends are growing some, selling the yearly increase to acquaintances, making a handsome profit on their investment as well as having a pleasant and profitable hobby. All varieties offered are recommended by the American Daffodil Society.

Daffodils for Naturalizing

The greatest and most effective use of Daffodils is to naturalize them in quantity in meadows and orchards, in woodlands and along the driveway, on the bank of the brook or along the shrubbery.

By planting some bulbs on the south side and some others facing north, a long period of flowering, lasting well over a month, may be enjoyed.

Daffodils are the most prolific of flowers. If you plant a single bulb it will not be long in gathering a family, and in the course of two or three years the spot in

which it grows will have become as populous as the tents of the patriarchs.

Planting mixed Daffodils is an investment that pays large dividends, **if the right varieties are used.**

The mixture presented by us is made up from named varieties and should, therefore, not be confused with other mixtures offered. This mixture is not grown as such, but varieties are selected that are especially adapted for naturalizing and will give an abundant and prolonged flowering period, increasing from year to year.

Dick Wellband \$1.75 each
The perianth is pure white and the cup a brilliant flame-orange. One of its most remarkable qualities is that the color does not fade but rather intensifies with age. The flower has unusual lasting qualities. Its greatest beauty lies in the startling contrast between petals and cup which makes it stand out even in the largest collection of Daffodils. An exhibition variety "par excellence."

Fortune \$6.00 each

It is a Giant Incomparabilis of the largest size, perfect form, and gorgeous color on a 2-foot stem; fine flat, overlapping perianth of great substance which stands boldly at right angles to the crown, of clear deep lemon-gold color with long bold crown of wonderful glowing coppery red-orange. It is of great substance, vigorous and very lasting—free bloomer.

***Tholia** \$2.15 per 12; \$14.25 per 100
In addition to a peculiar attraction at first sight, this flower leaves one with an impression that it is white, yet it is a whiteness that is not white. The recurving petals and the angle of the three trumpets are unlike the conventional short-cupped Daffodil. The stem is dark green, round and reed-like thin. Some call it the "orchid-flowered" Narcissus, which adds to the mystery. Tholia provides unusually good material for artistic arrangement. (Color illustration, page K).

Division 8: All Poetaz are hybrids from Poeticus Ornatus and Polyanthus Narcissi. The plants are tall and vigorous growers, bearing heads of large, well formed flowers, deliciously fragrant. There is no better group for indoor culture in flats, pots or bowls, while if planted in time, their hardiness outdoors leaves nothing to be desired.

Admiration \$1.55 per 12; \$11.00 per 100
This beautiful cluster-flowered Daffodil is especially lovely in full sunlight, as it has a transparent character, but the flowers viewed in shade do not look poor or papery. The perianth, which is a sulphur-yellow, seems rather to be of the quality of the soft taffeta silk which, in the old days, was known as "sarsenet," and the petals are slightly ridged lengthwise. The corona is of rich orange-scarlet and there are usually about 6 flowers to a stalk.

Cheerfulness \$1.05 per 12; \$7.75 per 100
The double Elvira, a very pleasing double white Poetaz, good stems, a fine garden and show flower.

Frons Hals \$0.60 per 12; \$4.25 per 100

A double Leedsii; flowers borne on tall stems; pure white, interspersed with very light lemon; a novelty and a good florist's flower, extremely late.

Nice flower; not too double, creamy white, interspersed with sulphur-yellow, deeper at the center; charming. (Color illustration, page 1).

***Twink** \$2.15 per 12; \$14.25 per 100
It is double, of the semi-full type, the petals alternating a soft primrose and clear orange, and so arranged as to give the flower a most attractive appearance, and making it a most adaptable flower for large scale decorative work; is very free flowering and hardy. (Color illustration, page N).

Von Sion \$0.70 per 12; \$5.25 per 100
Golden yellow flowers with a double trumpet and a single perianth. Prefers a cool soil and semi-shaded position, otherwise in some locations the flowers are liable to become greenish yellow.

Paper-White Narcissus Polyanthus Narcissus

Dishes of these, grown in pebbles and water, may be had in bloom continuously from Thanksgiving until Easter. Plant different lots every three weeks from October 1st until March 1st, and you can enjoy a constant succession of bloom.

Little Daffodils - Wild Species -

Particularly Recommended in This Class is
Bulbocodium Conspicuum

The following are charming little subjects for rock work, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and if happy, will soon establish themselves and afford a lovely picture in early spring. All the Bulbocodium (except Monophyllum) and the Cyclamineus like moisture, and should, therefore, be planted at the foot of the rockery. Bulbocodium monophyllum flourishes in a warm, dry sheltered situation planted in almost pure sand. Triandrus Albus (Angel's Tears) and Juncifolius delight in partial shade and a light, gritty soil, and should be given a well drained position.

Soleil d'Or resembles the Paper-White Narcissus very much in habit but is of an exquisite deep yellow color, with an orange-yellow cup. The culture is the same as for the Paper-White Narcissus. We have some very fine stock of this variety to meet the steadily increased demand of the past few seasons and recommend its use in place of the Chinese Sacred Lily. Do not omit a few bulbs from your order.

*Soleil d'Or Top size, \$1.15 per 12; \$8.50 per 100

Lilium Candidum

(Madonna Lily)

The Madonna Lily is one of the loveliest of white Lilies, popular throughout the world, loved and admired by all. Its delightful fragrance and lovely white flowers have made it a universal symbol of purity. Plant it in groups of three or more bulbs, close to the pale blue Delphinium Belladonna. It will be the loveliest spot in your garden

during late June and early July. Madonna Lilies are simple to grow if you will plant in full sun and perfectly drained soil. Most Madonna Lilies are grown in France. Bulbs from the north of France are better than those grown in Southern France. We offer, therefore, Northern France grown bulbs as follows:

Lilium Regale

(The Regal Lily)

One of the most beautiful and one of the hardiest Lilies in cultivation—"Lilium Regale" is truly a Royal Lily, worthy of a place in every garden; it is a lover of loam and sunshine. A vigorous grower with sturdy stems, 4 to 6 feet high, densely covered with fine foliage. Center of flower flushed with yellow shading to white at outer edges; externally the flowers are streaked with

brown on the "ribs," shaded through the almost translucent petals with a delightful pearly tint; the contrast between the color of the reverse of the petals and the gold shading of the throat is extraordinarily beautiful. The Regal Lily is very floriferous and when thoroughly established, bears as high as 18 to 20 flowers during the season. (Color illustration, page O).

Fall-planted bulbs should be protected against freezing.

Lilium Testaceum

Also known as "Excelsum" and as the "Nankeen Lily." One of the choicest garden Lilies. The warm apricot tone almost a cafe au lait, set off by brilliant orange anthers, puts it in a color class by itself; in fact, many people consider it the most graceful and lovely of all Lilies. It is beautiful for every kind of garden use but because of its tender coloring, must be planted in a mixed border with brighter flowers. In combination with light-shaded Delphiniums or with the Madonna Lily, which it resembles, it is most effective. It has the texture of Lilium Candidum, with reflexed petals and does well under the same conditions as Candidum. Four to five feet high, June-July flowering. (Color illustration, page P).

Lilium Philippinense *Formosanum*

Not unlike the Regal Lily in general appearance. The slender stem is covered with the same grassy foliage of the Regal Lily. The substantial blooms are trumpet-like; in fact, they are long, lovely white flowers, with a beautiful pale emerald-green throat which gives the flower a distinct and delicate appearance. They commence blooming in early August and flower until stopped by frost. Bulbs when established will produce 3 to 4 spikes each with 4 or 5 blooms. It is a most liberal flowering Lily, to all of which may be added that they are among the easiest grown. September flowering.

Lilies for the Garden

Lilies, unlike Tulip bulbs, are not all grown in one locality under one and the same conditions, but are gathered together from many foreign countries. All ripen off at different times of the year; therefore, orders for Lilies cannot always be filled at one time. The requirements of Lilies vary with each variety. We have a booklet on their culture, which will be sent to you

upon receipt of 25 cents.

Because of the lack of knowledge and the carelessness of many planters, we do not guarantee Lilies to grow. We do, however, guarantee to supply you bulbs in good condition and will replace without charge, any damaged bulbs, immediately upon hearing from you.

Their culture is the same as for Narcissus and just as easy as for that flower. They are easily naturalized in almost any soil. Plant them about 3 inches deep and leave them alone. They are especially happy under oak and deciduous trees, in the rock garden, or in rough, gritty soils.

This mixture contains the following colors: blue, red, yellow, white, and is good for naturalizing. Bulbs self-sow and increase quite rapidly.

Calla - Zantedeschia

Bulbs should be set with the crown, or top, protruding just above the surface. When in growing condition, warm water given several times during the week will hasten the flowering period and increase the number of blooms. Plant but one in a pot. We call especial attention to the Yellow Calla, which is one of the grandest varieties in cultivation, and most valuable for house or conservatory decoration. Plant Callas indoors in the late fall of the year. In April or May dormant bulbs may be planted near the pool in a sunny spot where they will flower beautifully in August or September.

Camassia

(Hardy)

There are few bulbous plants that meet climatic or soil conditions better or give a more attractive bloom. They are hardy without protection, and thrive either under ordinary garden conditions or when naturalized in open, moist woods or in not too dense a grassy growth. The flower stems are 3 to 4 feet high with as many as a hundred star-shaped flowers measuring 1 1/2 inches across and flowering in long succession.

Calochortus

Until one has seen a good collection of these plants, he has no idea how much Nature can do in the variation of one flower. All Mariposas are forms of Calochortus, yet there are several strains, all with the slender grace of stem belonging to the species. Cup-shaped flowers, one to many on a stem, wonderfully marked with eyes and dots and pencilings in rich colors, are characteristics. Yet each strain carries out the plan on a color scheme of its own, and then can be compared only with the orchids in wonderful variability of beauty. "Mariposa" is simply the Spanish word for butterfly, and is applied to these Tulips because the eyes and markings of the flowers are so much like those on a butterfly's wings. The bulbs are small and should be planted about 2½ inches deep and covered during winter. (Color illustration, page R).

- ***Clavatus** \$1.55 per 12; \$10.75 per 100
The largest flowered and the stoutest stemmed of all Mariposa Tulips. The blooms, which are shaped like a bowl, are often over 4 inches across, of a deep yellow, and the lower half covered by stiff yellow hairs.
- ***Venustus El Dorado** \$0.70 per 12; \$5.25 per 100
They grow from 1 to 2 feet high and branch. The flowers are simply marvelous in their variety of colors and markings. Scarcely two are alike; in a mixed lot they may vary through white, lilac to purple and again through shades of pink to claret-red. In any mixture whites, more or less eyed, predominate. There is no better investment for the flower lover than a quantity of these bulbs. They thrive best in a rather porous soil, either sandy or gritty, and will grow either in sun or light shade. Flowers are 2 to 4 inches in diameter. Mixed colors.
- ***Venustus oculatus** \$0.70 per 12; \$5.25 per 100
Wonderfully varied in whites and creams. More or less tinted purple, and with very rich eyes. We have had the flowers 4 inches across. The plant is a good grower, and the flowers are most satisfactory.
- ***Finest Mixed Colors** \$0.60 per 12; \$4.00 per 100
This is a lovely mixture containing many varieties; planted in a sheltered spot in the rockery they will make a charming lot of color.

Chionodoxa - Glory-of-the-Snow

A mass planting forms one of the most sumptuous displays of floral beauty, a mass of blue and white, intense and brilliant. They bloom at the time of the Crocuses, producing dwarf flower spikes, bearing from 12 to 15 flowers of a sky-blue with a pure white heart, creating a lovely effect. They should be planted in the fall, 3 inches deep, about 18 bulbs to a square foot, in a sunny location or in half shade and in places where they can remain undisturbed for a number of years. The flowers will cross with one another and will seed themselves, forming natural colonies. All are 6 to 7 inches high, therefore excellent in the rockery as well.

- ***Luciliae** **STANDARD VARIETIES**
Top size bulbs, \$0.35 per 12; \$2.50 per 100; \$22.50 per 1000

Eranthis - Winter Aconite

Plant Bulbs Immediately Upon Receipt

These produce about two weeks before the Cracus are in bloom, little yellow flowers like buttercups about 3 inches above the ground, with settings of fine green, frilled collars which never seem to mind the worst of weather conditions. Will thrive under trees where few other plants can hold their own. They seed themselves freely and colonies from self-sown seed are soon formed. Plant at once upon receipt, firmly, 2 inches deep in shade or full sun, about 18 bulbs to a square foot.

- ***Cilicica** \$0.55 per 12; \$3.50 per 100
Deep yellow flower, foliage bronzy and finely cut; lovely rock garden variety.
- ***Hyemalis** \$0.50 per 12; \$3.00 per 100; \$27.50 per 1000
The common Winter Aconite, clear yellow, very early. Good for the rock garden, under Sedums or under trees. Plant bulbs at once when received. (Color illustration, page Q).

P.S.—A lovely combination of very early flowering bulbs is Crocus Tommasinianus, pale lilac; or Crocus Sibirica, dark blue; with the cheerful yellow Eranthis Hyemalis; all three poke their blossoms through the snow before the winter has gone and flower at the same time.

Eremurus

A noble family of hardy plants, most delightful and desirable for stately and colorful groups in large plant borders and shrubberies. They are perfectly hardy, and when well established, produce dozens of giant flower spikes, like huge Hyacinths, attaining a height of from 6 to 10 feet, the flower spike (comprising several hundred flowers) being from 2 to 3 feet long. They thrive in any sunny, well drained border. They should be planted in early fall only. These wonderful, gigantic flowering plants do not require a great depth of soil, as the fleshy roots spread outwards. The plant disappears above ground after flowering and annuals may be planted close to them to fill the vacant space. A light mulching is advised as a winter protection.

The following list includes some of the finest and rarest in commerce, all flowering in July. No. 1 and No. 2 size roots not guaranteed to bloom first year.

Vigorous, enormous spikes of widely expanded flowers of clear yellow. Six feet high.

Eremurus 3-Year-Old Seedlings.

During the past few years there have been many requests for Eremurus seed and young plants. The seed of Eremurus is difficult to germinate; we, therefore, never offered it because it was bound to lead to disappointment. Seedling roots, one or two years old, are too small for the average person to care for, but we are now able to offer some fine roots which are three years old. We know these will grow without trouble and surely bloom within two years. These young roots are unnamed but are the same varieties as offered above. It will be well worth your while to plant a few of these healthy young roots for growing on.

- ***Eremurus Seedlings** \$4.25 per 12; \$30.00 per 100

Erythronium - Trout Lilies

These are charming woodland plants, producing in early April, small lily-like flowers of which the colors run in delicate tints of white, pink, cream, bright yellow and rose. They thrive in wooded places under shrubs and in shaded corners or crevices of the rockery.

Their beauty is enhanced by their richly mottled leaves. They like a light, rather moist but well drained soil. Plant the corms about 3 inches deep. All grow about 6 to 7 inches high.

Fritillaria - Guinea Hen Flower

Fritillarias are lovely bulbous plants for rock garden or indoor culture. The stems are leafy and most graceful, with many pendent, bell-like flowers. One species found in Southern California is called "Mission Bells," while in other places local species are called Brown or Chocolate Lilies.

***Meleagris** \$0.50 per 12; \$3.25 per 100; \$30.00 per 1000
Bronze-purple. These produce in early April dwarf, pendent, reddish brown and purple bell-shaped flowers in curiously checkered shades, on stems 12 inches high. They are very effective in colonies, requiring a somewhat dry situation. Invaluable for the rockery, for naturalizing and very lovely grown in pans indoors; use same culture as for Freesia. (Color illustration, page T).

Flowers greyish purplish checkered, very fine variety. 14 inches high.

Fritillaria Imperialis

(Crown Imperials)

The Crown Imperials with their stately gracefully drooping flowers should not be missed in any garden. They want a good soil, much sun, and can be left undisturbed for years. Must be planted as early as possible and have to be carefully protected against sharp winds, as the tall plants grow 4 feet and more high. They are real "grandmother's favorites" and should be in every hordy border or old-fashioned flower garden. (Color illustration, page R).

Fritillaria - Mission Bells

The true Mission Bells do better in a clay soil in full sun. The woodland Fritillarias like woodland soils and conditions, and in cultivation some shade and a free soil. They are hardy as far north as Wisconsin.

***Lanceolata** \$1.00 per 12; \$7.50 per 100
Grows from 1½ to 3 feet high. The flowers are green and brown mottled prettily, produced on top of the stem, a most attractive variety.

***Recurva** \$1.40 per 12; \$10.00 per 100

***Pudica** \$1.25 per 12; \$9.00 per 100
Of still a different habit. A low plant about 6 inches high with a single clear bright yellow bell. Likes sandy or loose soils and a warm spot in the rockery where you will enjoy it immensely.

***Mixed Varieties** \$0.85 per 12; \$6.50 per 100
This mixture is made up of Mission Bells and varieties of Meleagris, and would be very interesting in the rockery.

Freesias

Without doubt the most sweetly scented flower grown; a single bloom permeates the living-room with its delicate perfume. Although they are quite popular and very easily raised, we suggest the following treatment: Procure the bulbs as early as possible and plant them in August, 6 to 25 bulbs for a single pan. The soil should be a mixture of good loam. The bulbs planted early, say August and September, must be placed outdoors until cold weather sets in; must be regularly watered and kept growing all the time. In November, before frosts appear, the pots should be placed in the window of a cool room.

***Elder's Giant White** \$1.05 per 12; \$7.75 per 100
Giant pure white flower on long stem. The largest white Freesia.

***Golden Daffodil** \$0.55 per 12; \$3.50 per 100

***Purity Superflora** \$0.55 per 12; \$3.50 per 100
A magnificent, snowy white; of very large size and great length of stem. A truss bearing from 8 to 10 buds, of which six are often open at one time.

***Pink Beauty** \$0.60 per 12; \$3.75 per 100

Ruth Chatterton \$1.05 per 12; \$7.75 per 100
The upper portion of the petals both inside and outside, is Tyrian rose, shading down the petals to Tyrian pink. These colors are shot with delicate streaks of cadmium-yellow, becoming solid yellow down into the perianth. The flowers are large, four and five open at one time, supported by long, heavy stems with two and three long laterals.

***Wisteria** \$0.65 per 12; \$4.75 per 100

***Mixed Colors** \$0.55 per 12; \$3.50 per 100
A lovely mixture made up out of many varieties. All the shades of the rainbow. (Color illustration, page S).

Galanthus - Snowdrops

Snowdrops belong to the most beloved early flowering spring bulbs. They require very little attention, and can remain undisturbed for years and years. They like rather moist and cool soil. To get a lovely effect they must be planted thickly, while they can be grown under trees and shrubs, in woodlands and in lawns. In the latter case, the lawn should not be mown before the leaves are withered, or next year's blooms may be spoiled.

***Nivalis** \$0.45 per 12; \$3.00 per 100; \$27.50 per 1000
This is the old-fashioned favorite. Its lovely white nodding blooms are out before the frost is out of the ground; one of the lovely bulbs that tell us spring is almost here. A group naturalized in the shade of shrubs or under trees is worth while. Once planted they remain for a lifetime. (Color illustration, page Q).

***Nivalis flore pleno** \$0.55 per 12; \$3.50 per 100; \$32.50 per 1000
Double form of the common Snowdrop, requiring same care.

***Elwesi** \$0.45 per 12; \$3.00 per 100; \$27.50 per 1000
This is a larger type than the old-fashioned Galanthus Nivalis and comes from Southern Europe. It is a very fine kind for the warm parts of the United States where the common Snowdrop does not do so well.

Byzantinus \$1.10 per 12; \$8.00 per 100
The Byzantine Giant Snowdrop, broad shiny leaves like Galanthus Plicatus and large snow-white globular flowers. Very early flowers; in mild winters we often have flowers here in January. It requires a somewhat sheltered position. May be gently forced in pots.

Gladiolus Nanus

New Tecolote Hybrids

They can be forced by the end of March, and come in very useful when most of the other bulbs have gone. In moderate climates these bulbs are planted outdoors. They multiply rapidly and are splendid cut flowers. They should be planted in the fall and protected with straw to prevent damage from frost. Slender stems and dainty orchid-like flowers.

"**Tecolote**" Hybrid Mixture \$0.70 per 12; \$5.00 per 100
Beautiful new strain, early flowering, with dainty flowers carrying the characteristic diamond-shaped markings on the lower petals. Long, strong stems. New pastel shades of lavender-blue, orchid, salmon, pink, rose, scarlet, orange and many others.

Tristis Concolor \$1.20 per 12; \$8.75 per 100
A most unusual species and one of the few fragrant Gladioli available. The flowers are white to pale yellow and in the evening especially, exhale a delightful lemon perfume.

Dutch Iris

Improved Spanish Iris—For Garden Planting

This very distinctive group is of recent origin and has in a few years won international recognition. The flowers are not only superior in substance, brilliancy and purity of color but also earlier, larger and of greater refinement than the old Spanish Iris. The new hybrids we offer are readily distinguished by the narrow orange stripe on the falls, while the older varieties have a larger yellow blotch. These Iris are unsurpassed as cut flowers, since they will stand any amount of handling, lasting fully a week in water. Their hardiness and interesting color range have made them very popular for garden planting. In extreme climates they need some protection. The varieties we list have been carefully selected to give the full range of colors.

Iris Reticulata

Fragrant Iris

- ***Reticulata** \$1.55 per 12; \$10.75 per 100
This lovely species is one of the treasures of the garden or rock garden. It can be described as a small form of the Spanish or Dutch Iris. Its main value lies in the fact that it may be forced into bloom in the house with the greatest ease. Six or eight bulbs put into a 4- or 5-inch pot when received will bloom about Christmas time. The fragrant blossoms remind one of a bunch of fresh violets. Perfectly hardy with reasonable protection. It is one of the loveliest early flowering bulbs for the rockery. To show it off well, plant a number of bulbs under the white Arabis Alpina; you'll enjoy the results more than we can tell you. (Color illustration, page Q).

p. s. Iris orientalis, Japanese and German Iris are hardy plants and are not listed in the bulb section. Complete collections are offered in the Hardy Plant section, pages 42-43.

Ixia - Corn Lilies

- ***Mixed** \$0.35 per 12; \$2.25 per 100; \$20.00 per 1000
These beautiful bulbs from the Cape Colony (South Africa) are far too little known; they should be planted in late autumn and in cold districts they must be covered with a thick layer of straw or leaves. They are splendid for southern states. There are few bulbs so lovely and graceful and those fortunate enough to live where the climate is mild should plant them by the hundreds.

Lachenalia

They are especially useful as pot plants because of their bright flowers and interesting foliage. The flowers are more or less bell-shaped and bear a slight resemblance to Grape Hyacinth (Muscari) in shape and size. The stems are 6 to 9 inches tall.

Culturot Directions: The bulbs may be planted five or six in a 5-inch pot in a compost of two parts sandy loam and one part leaf mold. Water sparingly. Place in cold frame until weather becomes too cold, then move to a greenhouse or bring in house. Water may be used frequently in growing stage. May be had in bloom at Christmas. Bulbs multiply freely and may be used from year to year.

- Pendula superb** \$3.25 per 12; \$22.50 per 100

The pendulous flowers are produced on thick, fleshy stems about 10 to 12 inches in height and remain a long time in bloom. The color is a most beautiful velvety shading of orange-red with a blending of purple at tips.

They are absolutely hardy and some varieties are delicately fragrant. Botryoides, Azureum and Armeniacum are beautiful when forced in the house, same culture as Freesias; while Plumosum is always a source of great interest. All are about 5 inches high.

\$0.40 per 12; \$2.50 per 100; \$22.50 per 1000
Bright blue, very free-flowering at the time of the Crocuses. This is the common blue Grape Hyacinth and fine in the rockery. Foliage is more compact, is better for the rockery than Hyacinth Botryoides. (Color illustration, page J).

This is indispensable in the garden for color effect; flowers are porcelain-blue; buds pink at opening. The plant grows from 1 to 2 feet high, bearing a panicle of flowers about 1 inch long in short pendent clusters. It is splendid for the open border or for naturalizing along the woodland path. We know of no other spring flower

which does so well in deepest shade. It flowers from the time Daffodils are in bloom, continuing while the May-flowering Tulips are at their best. Hardy Border and Rock Plants

Gardeners and lovers of flowers know about the importance of Hardy Perennial plants in the garden. Beginners, we would like to tell that these plants are long lived and with modest care and attention grow larger and finer from year to year. They exist in infinite variety, ranging from the tiniest edging or rock plant to tall, stately, robust plants for backgrounds in larger gardens.

Careful selection of plants will enable you to enjoy hardy flowers from earliest spring until snow. Masses of bloom may be had long before the annuals show color.

The most successful and colorful hardy gardens are those which are planted early in the fall or early in spring and where three or

more plants of one kind have been planted in a good sized single group. In the larger gardens it is best to use six or even a dozen plants of one variety. Create solid bold masses. Gardens so planted are easy to take care of and unquestionably the most satisfactory.

You, perhaps, know that Wayside Gardens are the best known, as well as the most critical, growers of Hardy Plants in the country. This reputation has been gained by painstaking caring for the needs of customers. We are ready to help you and sincerely hope that you will afford us this opportunity this year.

Hardy Phlox

Two Grown by Wayside Gardens Only

Phlox COLUMBIA

—the finest light pink
phlox ever introduced

(Plant Patent No. 118)

The color suggests a delicate cameo-pink with faint blue shading at center. The effect created by a well grown plant is exquisite and never before seen in Phlox.

The clearness of tane is remarkable, the brilliancy is so pronounced that immediate attention is given to this wonderful plant. As the flower ages, the blooms always retain their delicate pink shade; there never are any magenta tones visible.

Out of each leaf joint grows a lateral or secondary flower spike continuing the display of blooms long after the main flower head has disappeared. Calumbia is therefore well called the "perpetual flowering" Phlox.

Of great importance is the habit of Phlox Columbia, its strength and vigor is something rarely seen in plants. A well grown, two-year plant will produce from 5 to 15 flower spikes.

Phlox AUGUSTA

—the finest cherry-red
phlox ever introduced

(Plant Patent No. 252)

A strong growing plant of medium height, about 2½ feet when fully grown, with rich bronzy green foliage and stem. Color is best described as a brilliant cherry-red, not quite as deep as Beacon and much more intense and sparkling. The young florets at opening show a decided amount of orange. Unlike most Phlox of this color, it does not discolor or bleach in the sun. The color remains perfect under all weather conditions. Augusta is a beautiful vivid colored variety of exceptional growth and qualities and will eventually replace all other varieties of similar shade.

PLANTING: The table above shows the number of plants or bulbs required to fill a circular bed of the dimensions given. In plantings, begin at outside row—where 6 inches apart, 3 inches from edge of bed; where 12 inches apart, 6 inches from edge of bed. It is customary among professionals in planting a bed to set the plants or bulbs somewhat closer together in the two

outer rows, giving more space between each plant or bulb toward the center of the bed. A square bed will take about the same number of plants. For an oval bed, add length and breadth and divide by two. For example, an oval 9 feet long by 7 feet wide will require the same number of plants as a circular bed 8 feet in diameter.

Rodopel

The New Rodent Repelling Peat Moss

Protects Bulb Plantings

against ravages of rats, mice, moles and other destructive rodents. Rodopel is a new material so highly distasteful to rodent pests that they refuse to go near it in their search of food. Three years of study in laboratories and in the plantings of nationally known bulb growers have shown that damage by rodents is wholly eliminated when Rodopel is used.

How to Use Rodopel

It does not kill rodents but drives them away from the plantings. It is harmless to pets and birds.

Rodopel is simple to use. It is only necessary to scatter a small amount (about one heaping tablespoonful—more is harmless) around each bulb at planting time.

For small plantings done with a trowel drop a pinch of Rodopel in the bottom of the hole; set the bulb; partially cover the bulb with soil; then scatter more Rodopel around the bulb to ring it; and cover as usual.

For large plantings where the bed is dug out, scatter Rodopel lightly over the bottom of the bed; set the bulbs in place; spread a small amount of soil to partially cover the bulbs; scatter more Rodopel around the bulbs and cover as usual.

Rodopel is —

Harmless to bulbs.
 Harmless to other vegetation.
 Non-poisonous.
 Clean and pleasant to use.

Odor pleasant to humans—distasteful to rodents.

Packed in two sizes—

2-gallon size sufficient for 100 bulbs.
 5-gallon size sufficient for 250 bulbs.

Recommended for all bulbs liable to be eaten by rodents.

For your convenience in applying Rodopel it is impregnated on high grade peat moss which aids in preparing the bulb bed.

Hormodin

REG. U. S. PAT. OFF

The Root Forming Chemical

Developed by Boyce Thompson Institute for Plant Research

WHAT HORMODIN IS. "HORMODIN" is a hormone-like plant growth substance. Its principal use is to stimulate rapid root growth on cuttings. It has widespread use in propagating cuttings, whether rooted with ease, or normally rooted with difficulty. Many cuttings formerly impossible to propagate may now be rooted with the aid of Hormodin.

WHAT HORMODIN DOES. The Hormodin treatment is simple, economical, and scientific. It saves time, space and labor. Hormodin makes it possible for growers to reproduce plants from cuttings with high percentages of successful results.

HORMODIN HAS WIDE APPLICATION. Fortunately, the growth substances are not specific for certain varieties or groups of plants. This is particularly true with respect to cuttings treated with water solutions of Hormodin.

Different plants require different treatments as to the concentration of the Hormodin solution, and the number of hours of treatment required. Growers are urged to follow directions, a copy of which is enclosed in each package.

To treat cuttings with Hormodin, merely place the basal ends of the cuttings in a Hormodin solution of recommended strength for a designated period of 4 to 48 hours. The cuttings are then removed from this solution and planted in a propagating bench, as in methods normally used. Cuttings so treated root quicker, and have more growing roots per cutting.

ADVANTAGES OF PROPAGATION FROM CUTTINGS. Hormodin makes it possible for growers to propagate practically all varieties of plants from cuttings. With Hormodin such plants as evergreens, deciduous shrubs, fruit, nut and forest trees, sub-tropical and tropical fruits, herbaceous perennials, roots, sprouts and annual flowering plants, can now be propagated in higher percentages. Growing plants from cuttings offers many distinct advantages. Germinating plants from seed often involves high labor costs, loss of expensive seed, and presents many hazards. Reproduction of many species from seed is a slow process. There is, at times, a wide variation in the results of types of plants that grow from seed. Many plants do not come true from seed.

To treat cuttings, the basal ends are left immersed in the solution to a depth of three-quarters of an inch to two inches for the recommended period of time. At the end of this period, the cuttings are removed from the Hormodin solution, washed off with fresh water, and are then ready to plant in the rooting medium. From here on, with but a few slight modifications caused by the rapid and abundant root growth induced by Hormodin, the care of the cuttings follows approved propagation practice. This is completely described in the Hormodin directions.

DEPENDABILITY OF PERFORMANCE. Hormodin brings dependable performance from plant cuttings at low cost. For a fraction of a cent per cutting, Hormodin increases the percentage of cuttings that root. The method of treatment is safe, certain, economical, and scientific.

Due to the rapid growth of abundant healthy roots, Hormodin-treated plants mature more quickly, and frequently flower more profusely.

Hormodin is tested for plant growth potency by the Boyce Thompson Institute. You purchase Hormodin on the basis of units of root-inducing power. The rigid chemical control in manufacture maintained in the laboratories of Merck & Co., Inc., by a staff of chemists long experienced in the manufacture of fine products similar to Hormodin, assures you of a high standard of uniform purity. Scientifically designed containers, convenient to use, bring Hormodin to you in a pure, potent condition, ready for use.

Nurserymen, greenhousemen, and other large growers will be particularly interested in the large economy packages. Each package contains a calibrated easy-to-use measure, complete directions, and a treatment chart. Order Hormodin today.

Wayside Gardens Bulb Fiber

(Patented)

A Charming Method of Growing Beautiful Spring Flowers For House and Table Decoration

The wonderful success which many of our correspondents have achieved in growing Roman Hyacinths, Freesias, Narcissi, Tulips, Dutch Hyacinths, Lilies-of-the-Valley, and other bulbs in Wayside Gardens Bulb Fiber in bowls without drainage, proves that this is one of the most charming and effective methods of growing bulbs. Those who have neither a large garden, nor the convenience of greenhouses, or frames, or who have a difficulty in obtaining suitable soil find most of their troubles removed in adopting this modern method of growing bulbs in the house. It will be extensively adopted in the future when it is fully realized what excellent results may be obtained in this way.

The advantage of this system is that the bowls, having no drainage holes, can be placed anywhere about the house without fear of any mess or damage to furniture. Wayside Gardens Bulb Fiber is perfectly odorless and clean to handle; it is specially prepared for the purpose of growing a great variety of bulbs in the house. Leaves no dirt or stain. It can be used for several years.

Culture: Moisten the fiber to saturation, fill the bowl with the soaking wet fiber mixture up to the rim and plant the bulbs in the same manner as with ordinary soil. A little fiber should be shaken down into place after planting but should not be pressed down too tightly or

the bulbs will be forced upwards when root growth commences.

After planting, adopt either of the following plans:

The bowls may be placed in a cold frame, airy cellar or in a dark or moderately dark, airy, cool room. They must never be placed in a closed cupboard. It will not be necessary to give a great deal of water; perhaps once every two weeks.

In the case of bowls placed in the cold frame there will not be much need to give any water. Where, however, the bulbs are not exposed to rain, the bowls should be examined twice a month, care being taken that the fiber mixture is kept uniformly damp. For the first weeks after planting, additional water should be given sparingly, sufficient only to encourage root action. As soon as the bulbs are well rooted, water should be given more freely. **If the mixture is allowed at any time to become dry, the flower buds may go blind.** Should by any chance too much water be given, the bowls may be drained by tipping them on their sides.

When the bulbs have made a good top growth in the dark, the bowls should be placed in a sunny window where they will get the morning sun. They must have sufficient light and air to prevent the foliage from becoming drawn. Never place bowls on top of radiator cover. A temperature of 55 to 60 degrees is sufficient to obtain good blooms; the bulbs resent too warm a temperature.

The Best Bulbs to Grow in Wayside Gardens Bulb Forcing Fiber

Varieties Recommended

Hyacinths do wonderfully well in this fiber. First size bulbs or second size bulbs in a bowl make a charming display. All the varieties offered in our catalog may be used.

Roman Hyacinths, 5 or 6 in a bowl, make a very charming table decoration, and if potted early in September may easily be had in bloom by middle of December; if a number are potted at the date mentioned, a succession of these charming flowers may be had until the middle of January, by bringing a bowl into warmth, say every two weeks.

Paper-White Narcissi, Soleil d'Or Narcissi. These, if planted from early in September to the middle or end of October, will bloom from about the middle of December to the middle of January. Grow much stronger in our fiber than they do in pebbles. The flowers also last much longer.

Poetaz Lourens Koster, Poetaz Frons Hals. Charming specimens for house decoration grown in bulb fiber in bowls. They are deliciously perfumed and specially recommended. Should be grown in the same manner as Roman Hyacinths.

TRUMPET DAFFODILS

King Alfred. The merit of this variety is that it blooms early, and by planting in the beginning of October it may be had in bloom from about January onwards. It has a very bright yellow flower, which is thrown well above the abundant foliage.

Emperor always makes a handsome display, but as the bulbs are large it is desirable to have a large and deep bowl to put them in.

Aeralite and **Spring Glory** are favorite varieties. They always do well.

SINGLE EARLY TULIPS

Special care is required to see that they do not get dry at the roots because if this happens the pores of the roots close up and flowers fail.
